Design Note: filterBreeds.js

• Fetches Dog CEO list with Node 18's built-in fetch; 10s timeout via AbortController; checks non-200 and JSON shape.

• Filters breeds by a single CLI letter (default "b"), case-insensitive; validates input (A–Z only); friendly error for invalid args.

• Sorts breeds and sub-breeds with Intl.Collator; Title-Cases names; outputs a numbered list.

• Renders sub-breeds as "(sub-breeds: …)"; handles empty arrays and the no-results case cleanly.

• Edge cases covered: network failure/timeout, unexpected JSON, uppercase args, zero matches, hyphenated names; no crashes; non-zero exit on fatal errors.
